PROFESSIONAL SUMMARY

Applied AI engineer with hands-on experience designing and deploying end-to-end AI systems across NLP, computer vision, and sensor-driven intelligence. Strong focus on practical deployment, automation, and real-world impact in startup and production environments.

STRENGTHS AND EXPERTISE

Python	SQL	Team Leadership
Machine Learning	C	Communication
Deep Learning	n8n (Beginner)	

PROJECTS

- **GLOF early warning system using SAR images** - designed a predictive system using Sentinel-1 SAR images and CNN models to detect GLOF risks
- **GLOF early warning system using IoT sensors** - developed a real-time early warning system for GLOFs using IoT sensors and XGBoost, integrated water level, temperature, ground motion, pressure, and flow rate sensors to monitor critical parameters
- **Solace** - built an AI-driven mental health chatbot using Gemini for dynamic, emotion-aware responses, focused on real-time NLP, sentiment analysis, and user personalization
- **Scream** - developed a real-time scream detection application using MFCC, SVM, and MLPClassifier for high accuracy predictions

CERTIFICATIONS

- Introduction to Generative AI in Google Cloud Skills Boost
- Introduction to Large Language Models in Google Cloud Skills Boost
- Transformer Models and BERT Model in Google Cloud Skills Boost
- Create Your First Python Program from UST in Coursera
- Python 101 for Data Science in Cognitive Class

EVENTS

- IMPELLZ'23 (Idea Presentation), participated and presented a paper on 'Secure Biometric-Enabled Medical Data Management System' in 'IMPELLZ'23' organized by the Department of Computer Science and Engineering.
- 4th International Conference on Engineering and Advancement in Technology, participated and presented a paper on 'Advancement in Nanostructured Materials for Sustainable Energy Harvesting and Storage'.
- Bit Hacks Software Edition 2023, participated and qualified until the finals in the domain of AR/VR, and presented a 'VR Maze'.
- Smart India Hackathon '24 - Winner, contributed to the winning team in the SIH '24 event, where the problem statement was provided by DRDO Worked on machine learning (ML) and deep learning (DL) techniques to develop an early warning system for Glacial Lake Outburst Floods (GLOFs).

EDUCATION

B.Tech, Artificial Intelligence and Machine Learning
BANNARI AMMAN INSTITUTE OF TECHNOLOGY
